

Introduction to Modeling for Business Analysis - 4 Days

Course 447 Overview

- You Will Learn How To**
- Leverage critical modeling techniques to become a successful business analyst
 - Define the scope and intent of business modeling
 - Build business models that accurately reflect the complexities of the entire organization
 - Model core business functions and crucial processes with Business Process Modeling Notation (BPMN)
 - Apply UML to effectively analyze the enterprise structure
 - Communicate the completed business model to key stakeholders
- Course Benefits** In a modern, fast-paced business environment, analysts must possess skills to effectively communicate business goals, rules, structure and workflow to all relevant stakeholders. A working knowledge of modeling is the key to ensuring that this business challenge is met. This course is structured around a series of activities in which you gain practical modeling experience. In the context of a real-world case study, you apply best practices in modeling to help you fulfill your crucial role as a business analyst.
- Who Should Attend** Anyone who needs a practical foundation in business-modeling techniques as well as business analysts who need to gather requirements and create comprehensive models.
- RealityPlus** Through an extended case study, you gain confidence applying powerful modeling techniques and skills in the business analyst toolkit. Team- and computer-based activities include:
- Building models which include text and diagram elements
 - Highlighting inconsistencies between business rules and a decision table
 - Applying a CASE tool to refine a process diagram
 - Identifying gateways and swimlanes
 - Creating and refining a use case diagram
 - Elaborating a business process model
 - Revising a business object model
 - Defining business glossary entries
 - Finding inconsistencies and omissions using matrices
 - Specifying a business interface
 - Communicating the final results to the key stakeholders

Introduction to Modeling for Business Analysis - 4 Days

Course 447 Outline

Introduction

- Why do you need business models?
- Modeling techniques within the IIBA® *Business Analysis Body of Knowledge*® (BAROK®)

Defining the Scope of Modeling

What is a business model?

- Separating textual and diagrammatic elements
- Contrasting scope with level of detail

Crafting a process to develop a business model

- Applying the steps: elicit, analyze, document, validate
- Iterating the steps
- OMG modeling standards
- Facilitating requirements workshops
- Correlating models to project type and deliverables

Charting the multidimensional aspects of a business model

- Applying the five Ws approach: who, what, where, when, why and how
- Selecting the right modeling approach
- Employing CASE tools and simulation

Mapping the Business Landscape

Analyzing the enterprise

- Exploring the enterprise architecture
- Decomposing the architecture into its components: business, technology and other perspectives

Applying business rules

- Documenting the constraints: operative and structural
- Representing rules with decision tables

Scoping Business Functions

Initiating the process with functional decomposition

- Determining the functional hierarchies
- Distinguishing between functions and processes

Drawing UML use case diagrams

- Defining scope and boundary
- Identifying the actors and stakeholders

- Refining the use cases

Documenting business use cases

- Selecting the level of detail: brief, casual or fully dressed
- Specifying preconditions and postconditions

Modeling Business Processes

Applying process modeling techniques

- Workflows
- Events
- Activities
- Decisions
- Sequencing
- Messaging
- Roles

Leveraging Business Process Modeling

Notation (BPMN)

- Benefits from a standardized approach
- Sequencing and classifying activities
- Decomposing activities into subprocesses and tasks
- Categorizing events

Refining business process diagrams

- Choosing the right gateway: decisions, forks and joins
- Mapping the processes to swimlanes and pools
- Supplementing the model with artifacts: data objects, groups and annotations

Analyzing the Enterprise Structure

Establishing the business domain

- Documenting the workers and organization units
- Modeling systems, documents, information and tools

Structuring the enterprise with UML class diagrams

- Determining object attributes
- Generalizing and specializing relationships
- Constructing associations between the classes
- Packaging for domains and functional units

Finalizing the Business Model

Achieving complete coverage with matrices

- Prioritizing features
- Cross-referencing requirements
- Correlating behaviour with roles

Contextualizing the model with perspectives

- Documenting business interfaces
- Mapping from means to ends
- Capturing time parameters
- Specifying Supplementary and Quality of Service requirements

Communicating the Model to Key Stakeholders

- Choosing the right models for your audience
- Converting business models into user requirements
- Delivering and presenting your models
